Colorado Company Liteye Receives \$18mil Contract for Counter UAS systems

Counter Unmanned Aircraft Defense Systems to be delivered Immediately

Centennial Colorado —Liteye Systems has received an \$18 million follow on contract for delivery of numerous containerized anti-unmanned aircraft systems, or C-AUDS for short, from the US Air Force. These systems will all deliver in the next 120 days. This is the 5th contract for C-UAS systems and services Liteye has received since the fall of 2016.

The US version of the AUDS system first deployed with the US Army in late 2016 and has fast become the go to defense system in combat. With many systems already in the field providing real world experience, against very real threats, Liteye is developing more advanced capabilities that can be layered into their solutions. These advancements will be needed to combat the growing threat today, and for years to come, from the fast growing unmanned or robotic systems market.

“The unmanned systems industry is innovating at an incredible rate.” said Kenneth Geyer, CEO of Liteye, “Unfortunately with all the great benefits that provides it also spawns the rogue operator who uses that tech in a malicious way. At Liteye our goal is to stay ahead of that threat.”

Liteye’s close partner companies of Pratt & Miller, Numerica, and Chess Dynamics form the core team that is producing the new C-AUDS variant in Centennial. This containerized system features a state-of-the-art operator suite, hardened for use in any climate, that can easily be moved between locations. The platforms innovative design allows for the ability to “Bolt on” new technologies in the future as threats evolve in the field.

Liteye is now deploying and supporting their AUDS, M-AUDS, M-AUDS-KE, and C-AUDS variants of their C-UAS system. All four have the capabilities to detect, track, identify, and defeat enemy UAS with layers of different technologies coming together to create a solid line of defense. When you need to really protect critical infrastructure and human life from airborne unmanned threats contact Liteye.

About Liteye Systems, Inc. (www.Liteye.com)

Located on the front range of the breathtaking Rocky Mountains, Liteye Systems, Inc. is a world leader in technology solutions manufacturing & integration of Counter Unmanned Aircraft Systems (CUAS), Drone Sense and Warn Systems, rugged high-resolution head mounted displays (HMD), augmented weapons sights, covert thermal surveillance systems, electronic warfare packages, radar systems, and fire control software. Our cutting-edge solutions feature revolutionary designs in optics, electronics, ergonomics, and form factors that enable a broad range of military and commercial applications. Our R&D team delivers sophisticated custom packages for some of the world's largest companies and government agencies. With offices in the UK and sales affiliates worldwide, Liteye is protecting critical infrastructure from real world threats.
